Emergency Management Assistance Compact (EMAC) resources in California

The Emergency Management Assistance Compact (EMAC) is the Nation's mutual-aid system that provides a formal structure where all 50 States and 4 Territories have the ability to share resources across State boundaries. The Cal OES EMAC Coordinator in coordination with the Cal OES Fire Branch are working together to request and coordinate needed resources via the EMAC Compact.

- The following states have EMAC resources in California:

- Idaho: 5 engines
- Montana: 5 engines
- New Mexico: 5 engines
- Washington: 15 engines
- Utah: 10 engines

WEATHER OF CONCERN

Weather of Concern

Northern California

- Warmer temperatures are expected the next few days across NorCal with areas of smoke and haze.
- Slightly above normal temperatures; however, hot and dry conditions are expected this week.
- Unseasonably hot conditions return to portions of Siskiyou County Wednesday and Thursday; a Heat Advisory is in effect.
- Smoke and poor air quality will continue to be an issue across the area.

Southern California

Heat:

- An extended heat wave continues across the region, likely peaking in many areas on Tuesday, with temperatures decreasing some on Wednesday but rising again on Thursday.
- Most interior sections will continue to see triple digit readings.
- The long duration of hot daytime temperatures combined with very warm overnight lows will likely bring significant heat impacts to Southwest California.
- Even portions of the coastal plain could see significant heat impacts, especially for those without air conditioning.
- Elsewhere across the area, the hot and dry conditions will result in elevated to briefly critical fire weather conditions.

Elevated to Critical Fire Weather Conditions:

- Red Flag Warnings in effect through today, 08/07/18, for the Los Angeles, Ventura, and Santa Barbara Count Mountains, as well as the Santa Barbara South Coast, Santa Clarita Valley and San Luis Obispo Mountains.
- Elevated fire danger across much of Southwest California due to extended period of hot and dry conditions with very dry fuels.
 - Widespread minimum humidities in the 5 to 15 percent range teens away from the coast - lowest yesterday and today, 08/07/18.
 - Northwest to northeast wind gusts between 35 and 50 mph - Strongest yesterday afternoon and night, 08/06/18.
 - Gusty southwest interior winds today, 08/07/18.
- Very warm overnight lows with poor humidity recoveries.
- Large vertical plume growth possible with hot and unstable conditions in the mountains.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

*** Hot, dry weather will continue, weekend thunderstorms not looking as possible ***

High pressure is still dominating our weather pattern for a continuation of hot, dry conditions across the Northern California region overall prevailing into early next week. It does appear likely that a low pressure trough will move through the Pacific NW later Thursday into this weekend. Just a bit of cooling and some increase in wind speeds are now what is expected from that change in weather pattern for the region. There is also some uncertain chance that a few afternoon thunderstorms could develop just south of Tahoe Sunday and Monday as some tropical moisture enters the picture from the south as a hurricane decays well west of Baja. The marine layer along the coast will vary in depth this week and continue to not reach very far inland.

High temperatures will remain and low RH will continue to be mostly 100-104 in the warmest inland valleys, although dense smoke cover can lower those numbers a bit. Low RH values will also continue to be from about 7-17% in the driest locations. Afternoon westerly winds with peak gusts of 15-25 mph will occur again today west of the Coast Range and through its gaps in places. Much lighter westerly afternoon winds are expected in those areas Wednesday and Thursday with somewhat gusty S to SW winds expected east of the Coast Range. Those southerly winds will be a bit stronger Thursday with afternoon gusts 15-25 mph near and east of the Cascade/Sierra crest and locally in the northern Sacramento Valley.

SOUTHERN CALIFORNIA

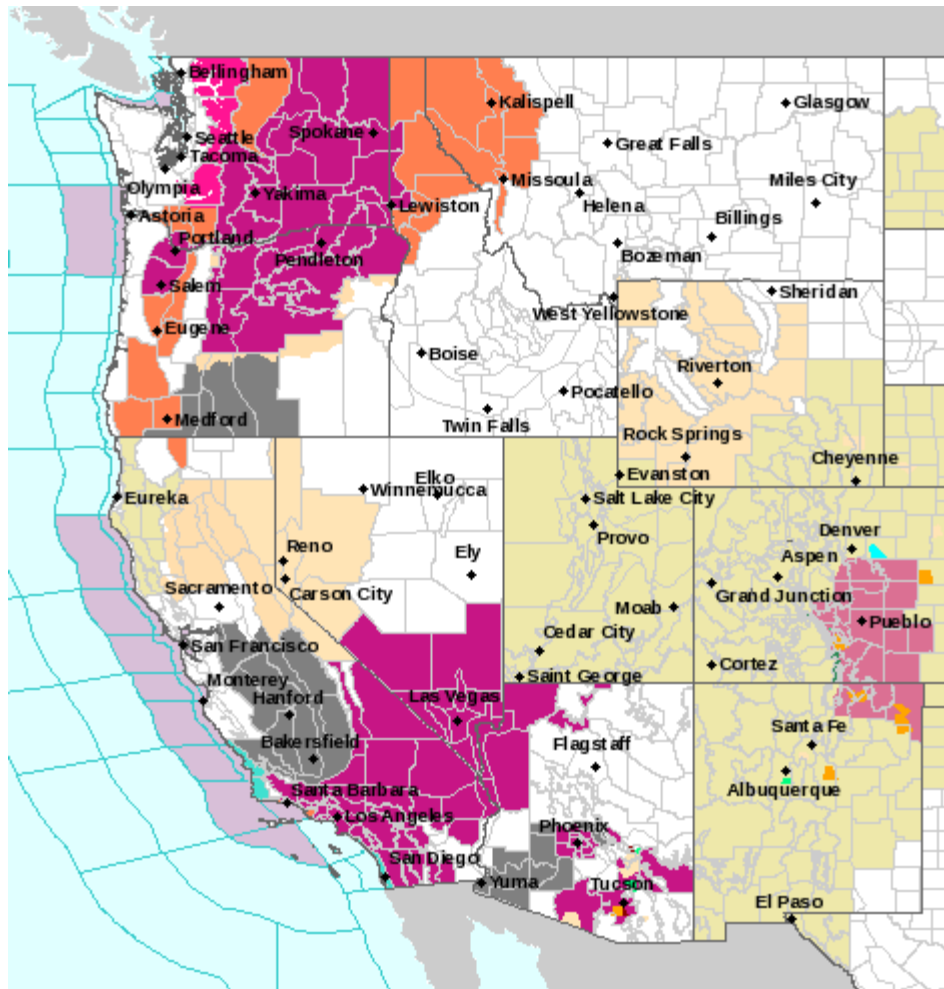

Near record high temperatures today

Locally breezy conditions in Santa Barbara County and the I-5 Corridor this morning

Isolated wet thunderstorms returning to a few areas later this week

High pressure overhead coupled with a north and northeast surface pressure gradient will result in near record high temperatures today. Most locations will be 10-15 degrees above normal with highs reaching the upper 80s in the mountains and 105-110 in the valleys. Minimum RH will be very low with afternoon readings only in the 8-12% range. Winds will be light over many areas, but local north winds of 15-30 mph will be possible this morning across Southern Santa Barbara County and the I-5 Corridor. Skies will remain sunny throughout the day. Wednesday, highs will drop 3-5 degrees due to a weakening of offshore pressure gradients, but in general, expect temperatures to remain around 10 degrees above normal through the end of the week with highs of 100-105 in the valleys and lower foothills. A slow spreading of monsoonal moisture is expected over Southern California which will lead to a bit higher RH across areas from Los Angeles County south and eastward. Isolated wet storms will be possible each afternoon beginning Wednesday across the deserts south of I-15 and the east sides of the San Bernardino and Cleveland National Forests. This weekend, temperatures will moderate a bit and some return of sea breezes can be expected. Isolated storms may spread into the Sierras over the weekend.
